# Double-Take<sup>®</sup> MOVE<sup>™</sup>

## Minimize Downtime when Upgrading or Migrating Servers

### Overview

- Perform most upgrade and migration work during the normal workweek
- Achieve huge savings by reducing downtime from days to minutes
- Reduce costs by consolidating servers using many-to-one replication/synchronization

Double-Take Move (formerly Migrate While Active<sup>™</sup>) eliminates the pain normally associated with upgrades and migrations to IBM<sup>®</sup> Power<sup>™</sup> Systems servers running [AIX](#) operating environments, by allowing your company to continue its operations normally – with virtually no downtime – while you perform this essential work. Compare that to the hours or even days of downtime that you’ve probably accepted in the past.

Double-Take Move uses Vision’s advanced high availability technologies to rapidly copy business-critical data to your new Power Systems server and keep it synchronized with your production system in real-time. To ensure that you’ll have a ready-to-run server, Double-Take Move [mirrors](#) all of the data and objects needed for a successful upgrade or migration.

Because you don’t have to worry about downtime, you can take as long as you need — during normal business hours — to thoroughly test the new system. After validating your new Power Systems server environment, move users and processes to it in just minutes.
