## Take your disaster recovery protection beyond mere tape backups!

MIMIX RecoverNow affordably provides reliable, expansive discovery protection *AND* lets you to recover single objects or entire applications to any point in time!

- Assure disaster recovery protection
- Dramatically reduce recovery times
- Recover data to any point in time with [CDP \(Continuous Data Protection\)](#)
- Backup data changes to non-IBM i servers

## Backup Plus

- Captures transactions that occur between tape backups
- Supports aggressive service level agreement (SLA) goals by dramatically reducing downtime and data loss
- Automates and enhances backup processing
- Simplifies journal management by automating most tasks
- Keeps operations running 24/7 by eliminating the downtime from tape backups
- Provides automatic notification & self-correction capabilities via AutoGuard™

## Fast, Granular Recovery

- Reduces recovery time to as little as 10 minutes
- Leverages and extends IBM i journaling to protect more of your data
- Ensures a more complete recovery than tape alone
- Provides flexible, any-point-in-time recovery via Vision's RightTime™ CDP
- Facilitates the widest possible range of recovery point options
- Guides you through system recovery via Recovery Assistant™
- Saves time and money by rapidly recovering any corrupted or accidentally deleted object
- Reduces the risk of recovery errors with extensive automation
- Recovers data to its state at any point in time you choose
- Reduces the risk of recovery problems and errors
- Protects against tape failure as RecoverNow assures a full, near-point-of-failure recovery from any earlier tape set.

## Affordable DR

- Eliminating downtime from tape backups alone can more than pay for RecoverNow
- Incurs the lowest total cost of ownership for its class
- No need to purchase additional hardware; use existing Linux, Windows, UNIX or IBM servers
- Compresses backed-up data by up to 60% to save on disk space
- Works with any size IBM i system

## How it Works

MIMIX RecoverNow harnesses the journaling functions of the IBM i operating system to capture all application and object changes that occur between tape saves, transferring these changes to a local or remote disk-based "vault" on an ongoing basis or at a frequency of your choosing. The storage repository or "vault" can be disk storage that you already own on any IBM i, UNIX, Linux, UNIX or even Windows environments.

Should disaster strike and you need to perform a full recovery, MIMIX RecoverNow guides you step-by-step through the tape restore process, as well as the process of retrieving and applying journals, to bring your system back nearly to the point of failure. Much of the process is automated and script-based which speeds backup and reduces possible errors. Compare this to relying on tape backups alone, which at the time of a disaster or failure, can mean losing up to a day's worth of data.

---

MIMIX RecoverNow goes a step further than most disaster recovery solutions with its integrated continuous data protection (CDP) capabilities. With CDP you can recover individual objects (or entire applications) to any point in time before or after your last tape save.
